

# Drilling Paper

## Lost Circulation Material

### Description

Drilling Paper lost circulation material is a shredded cellulosic fiber that can be used to reduce lost circulation in water based fluids. When combined with lost circulation materials made of coarser fibers, Drilling Paper rapidly bridges between the coarser fibers and speeds formation of the seal when larger openings in the formation are taking on fluid.

### Applications/Functions

- Drilling Paper can be used in varying concentrations in the form of slug treatments or as an additive to the entire fluid system.
- Can enhance core recovery in continuous wireline coring operations

### Advantages

- Disperses rapidly
- Effective in porous sands, gravels and fractured environments
- Compatible with other loss of circulation additives

### Typical Properties

- |                    |            |
|--------------------|------------|
| • Appearance       | Gray fiber |
| • Specific gravity | 1.4        |

### Recommended Treatment

- Drilling Paper can be added directly through a Venturi hopper or into the vortex of a high-speed stirrer.
- For normal treatment to the active system, add 10-35 lb/100 gallons drilling fluid (12-42 kg/m<sup>3</sup>)
- As a pill, add 35-95 lb/100 gallons of drilling fluid (42-115 kg/m<sup>3</sup>)
- The above are generalized concentrations of Drilling Paper Loss of Circulation Material to be added to water-based drilling fluids. The ultimate usage concentration will be based on local geology, application and mixing efficiency. In the event that further information is needed please refer to the Product Data Sheet or contact your local Baroid IDP representative.

### Packaging

Drilling Paper is packaged in 40-lb (18.2 kg) multi-wall paper bags.

### Availability

Drilling Paper can be purchased through any Baroid Industrial Drilling Products Retailer. To locate the Baroid IDP retailer nearest you contact the Customer Service Department in Houston or your area IDP Sales Representative.
